WOOD WASTE ELIGIBILITY ASSESSMENT SHEET

Category 3: waste products from the construction of buildings or furniture [regulation 8(3)(c)]

Records to be retained for each delivery. Where multiple deliveries (truckloads) have been sourced from a single site (for example, delivery of 10 truckloads of relatively homogenous waste collected from a single furniture manufacturer), details of all loads from that site can be recorded on a single form. Individual records should be retained for all separate loads sourced from different sites.

Description of material:	Main type of construction activity undertaken at site where the wood waste was created: (eg building dwellings, manufacture of wooden bookcases)
Location(s) where the wood waste was collected and dates:	Name of the company collecting the wood waste from the construction site:
Name of power station where wood waste is utilised for electricity generation:	

Delivery recording sheet

SELLERS DETAILS				**BUYERS DETAILS**			
Date(s) and time(s) of collection from construction site or furniture processing plant site	**Dedicated load or mixed source load (estimate % of load from this site)**	**Name of contractor collecting waste from construction site or furniture processing plant site (include truck number plate details)**	**Intermediary handlers – list all names and dates of exchange and amounts/volumes changing hands**	**Tonnes received at power station (weighbridge docket – net of vehicle)**	**Delivery date and time**	**Delivered by (include company name and truck number plate details)**	**Signature of receiver**
